

On page 13, line 25, please change "MC" to --IMSI--.

On page 18, after line 19, please insert the following paragraph:

--The invention is not limited to the particular details of the method and apparatus depicted and other modifications and applications are contemplated. Certain other changes may be made in the above described method and apparatus without departing from the true spirit and scope of the invention herein involved. It is intended, therefore, that the subject matter in the above depiction shall be interpreted as illustrative and not in a limiting sense.--.

IN THE CLAIMS:

On page 19, line 1, please change "**PATENT CLAIMS**" to --**WHAT IS CLAIMED IS:**--.

Please amend claims 1- 19 as follows.

1. **(Amended)** [Method] A method for controlling switching-oriented actions [(ACT1...ACT5) such as, for example, the routing of call connections or the acquisition of call charges, etc.,] in a mobile radio telephone system [(PLMN)] having [that comprises] at least one radio-oriented sub-system [(BSS)] with base station controllers [(BSC)] and base stations [(BTS)] for radio connections from and to mobile stations [(MS)] of mobile subscribers, having a switching-oriented sub-system [(SSS)] with subscriber data bases [(VLR, HLR)] and mobile switching centers [(MSC)] for line-switched connections and having an operation and maintenance sub-system, the operation and maintenance sub-system [(OMS)] having at least one operation and maintenance center [(OMC)] for [the] administration and control of [the] devices provided in the radio-oriented sub-system [(BSS)] and in the switching-oriented sub-system, comprising the steps of: [(SSS),

characterized in that]

establishing respective mobile radio telephone-specific data [(MD)]
for defining conditions [(CD1...CD2)] for a subscriber-contended control of
[the] actions [(ACT1...ACT5)] in [the] a mobile switching center, the data
5 being [(MSC) are] established subscriber-individually for at least one [or
more] mobile [subscribers] subscriber via the operation and maintenance
sub-system [(OMS)]; and

respectively evaluating in the mobile switching center [in that], given
one of an incoming call [(MTC) or], an outgoing call [(MOC)] or [given] a
10 message transmission [(USSD), the mobile switching center (MSC)
respectively evaluates] at least one of call-related data [and/or] and
subscriber specific data with respect to the conditions [(CD1...CD6)] and,
given a satisfied condition [(CD2, CD3, CD4)], controlling at least one action
[(ACT2, ACT3, ACT4) is controlled] subscriber-dependent.

15 2. **(Amended)** [Method] The method according to claim 1,
[characterized in that] wherein the conditions [(CD1...CD6)] for the
subscriber-dependent control of the actions [(ACT1...ACT5)] are respectively
defined by one of a single, call-related/subscriber-specific datum [or by] and
an operation of a plurality of call-related/subscriber-specific data.

20 3. **(Amended)** [Method] The method according to claim 2,
[characterized in that the] wherein operation of the call-related/subscriber-
specific data ensues via at least one of a logical AND operation [and/or via]
and a logical OR operation.

4. (Amended) [Method] The method according to claim 1, wherein [one of the preceding claims, characterized in that], given a plurality of satisfied conditions [(CD2, CD3, CD4)], different actions [(ACT2, ACT3, ACT4)] are controlled subscriber-dependent.

5. (Amended) [Method] The method according to claim 1, wherein [one of the preceding claims, characterized in that], given the parallel existence of a plurality of satisfied conditions [(CD1, CD4)], the actions [(ACT1, ACT4)] are provided with priority numbers [(PR3, PR2)] with which is defined a sequence of the actions to be controlled [is defined].

6. (Amended) [Method] The method according to claim 4 [or 5, characterized in that], wherein, given [the] parallel existence of a plurality of satisfied conditions [(CD2, CD3, CD4)], blocking information is used to exclude [(EXC3, EXC4) are employed with which] a respective action [(ACT3, ACT4) is excluded] of said actions from the control by another action of said actions [(ACT2, ACT3)].

7. (Amended) [Method] The method according to claim 6, [characterized in that] wherein the blocking information [(EXC3, EXC4) are] is entered into a table [(TEX)] that is located in one of the mobile switching center [(MSC) or in] and a subscriber data base of the mobile switching center.

8. (Amended) [Method] The method according to claim 1, wherein one of a [one of the preceding claims, characterized in that the] type [(CTY)] of call [(CA)] or [the] type of message transmission [(USSD)] is evaluated as call-related data.

5 9. (Amended) [Method] The method according to claim 1, wherein one of an [one of the preceding claims, characterized in that the] international mobile subscriber identifier [(ISMI)], [the] a service class mark [(SCM)] for triggering services of an intelligent network, [the] a mobile subscriber category [(CAT)] or [the] supplementary services usable by the
10 mobile subscriber [are] is evaluated as subscriber-specific data.

10. (Amended) [Method] The method according to claim 1, wherein [one of the preceding claims, characterized in that] given an outgoing call [(MOC)], [the] a subscriber telephone number selected by the mobile subscriber or a numerical range [(COD)] of the selected subscriber telephone
15 number is evaluated and, wherein the location telephone number or a numerical range of the location telephone number assigned in the mobile radio telephone system, respectively, is evaluated given the incoming call [(MTC)].

11. (Amended) [Method] The method according to claim 1, wherein
20 [one of the preceding claims, characterized in that], given an incoming call with call forwarding [(CF)] to a destination telephone number, the destination telephone number or a numerical range [(COD)] of the destination telephone number is evaluated.

12. (Amended) [Method] The method according to claim 1, wherein one of [one of the preceding claims, characterized in that the] blocking of [the] a call [or the], suppression of a call forwarding [or the], and blocking of [the] message transmission is controlled subscriber-dependent as an action.

5 13. (Amended) [Method] The method according to claim 1, wherein one of [one of the preceding claims, characterized in that the] cleardown of [the] a call [or the] and routing of [the] a call to an announcement device [means] are controlled subscriber-dependent as actions [(ACT4, ACT3)].

10 14. (Amended) [Method] The method according to claim 1, wherein one of [one of the preceding claims, characterized in that the] routing of [the] a call connection to a specific destination [or the] and acquisition of [the] call charges in a specific charge zone are controlled subscriber-dependent as actions [(ACT1, ACT2)].

15 15. (Amended) [Method] The method according to claim 1, wherein [one of the preceding claims, characterized in that the] routing of [the] a call connection to a service control point of an intelligent network [(IN)] is controlled subscriber-dependent as an action [(ACT5)], and [the] a service class mark [(SCM)] is thereby set preceding [the] a destination telephone number.

16. **(Amended)** [Method] The method according to claim 1, wherein
[one of the preceding claims, characterized in that] a telephone number
modification by insertion of subscriber-individual information into one of a
[the] selected telephone number given an outgoing call [(MOC)], [into the] a
5 location telephone number given an incoming call [(MTC)] or [into the] a
destination telephone number given an incoming call with call forwarding
[(CF)] is controlled subscriber-dependent as an action.

17. **(Amended)** [Method] The method according to claim 1, wherein
[one of the preceding claims, characterized in that] an eavesdropping of [the]
10 a call connection or an authorization or, respectively, suppression of
services/performance features are controlled subscriber-dependent as
actions.

18. **(Amended)** [Method] The method according to claim 1, wherein
[one of the preceding claims, characterized in that] a conversion of an
15 abbreviated code selected by the subscriber into a telephone number is
controlled subscriber-dependent as an action.

19. **(Amended)** [Mobile] A mobile radio telephone system for [the
control of] controlling switching-oriented actions [(ACT1...ACT5) such as, for
example, the routing of call connections or the acquisition of call charges,
etc.,], comprising:

at least one radio-oriented sub-system [(BSS)] that has [comprises] base station controllers [(BSC)] and base stations [(BTS)] for radio connections from and to mobile stations [(MS)] of mobile subscribers[.];
